WORK EXPERIENCE

Project - AC 360 NOV 24 - Present *US Bank Hyderabad*
Developer (Hybrid)

Analytics Customer 360 (AC360) is a centralized data platform that integrates and analyzes all customer information to provide a comprehensive view of customer relationships, behaviors and transactions

Role Description

- Developed Proof-of-concept (POC) data processing framework in Azure Cloud using Python and Spark.
- Migrated on-premises codebase to a scalable, cost-effective cloud environment.
- Responsible in executing scalable data transformation pipelines
- Create Unit Test Case Documentation with evidences to share with the client

Project - VCR JAN 22 - OCT 24 *All State Hyderabad*
Developer (Remote)

Vendor Customer Reconciliation (VCR) is a financial and operational gatekeeper system that performs a bi-directional comparison between internal policy records and third-party vendor ledgers to identify coverage discrepancies, prevent revenue leakage, and ensure accurate payments for valid services.

Role Description

- Performing Analysis on Data from different sources.
- Transformation of data to a uniform format to be fed into rule process of SAP.
- Generating Pipelines to automate data transformation to downstream sources.
- Collaborated with Underwriting and Vendor Management teams to define data quality standards, resulting in improved accuracy for vendor settlements and audit compliance.
